#### **DETAILED ACTION**

1. This action is in response to applicant's amendment received on 7/23/04.

## Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1, 7-9 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bauer (5,744,776) in view of Foreign Patent no. (DE 29813528UI).

Bauer discloses a method of forming a weakening area in an airbag cover substantially as claimed comprising: providing a cutting support (Fig. 1); providing a cutter 18; placing the airbag with the decorative layer 118 facing down on the support; and cutting a tear line of a predetermined pattern (Fig.9-16). Bauer does teach using blade (col. 2, lines 50-53), but does not show it in the figures. Examiner takes Official Notice that the use of a knife/blade is old and well known in the art. However, Foreign Patent's 528U1 teaches the use of a blade 10 for the purpose of reducing deformations and stresses in the leather structure. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified Bauer's cutter by providing the blade as taught by Foreign Patent's 528U1 in order to reduce deformations and stresses in the leather structure.

Application/Control Number: 09/944,157

Art Unit: 3724

4. Claims 2-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bauer (5,744,776) in view of Foreign Patent no. (DE 29813528UI) as applied to claim 1 above, and further in view of Towler et al. (foreign patent no. 2, 205, 284).

The modified device of Bauer discloses the method of forming a weakening area in an airbag cover substantially as claimed except for applying a predetermined force to the area of the cover and maintaining the cover against the support with a vacuum. However, Towler teaches the step of applying a predetermined force to the area of the cover and maintaining the cover against the support with a vacuum for the purpose of precisely positioning and supporting the workpiece. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified Bauer's cutting support by providing the vacuum as taught by Towler in order to obtain a precise position and support for the cover.

5. Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Bauer in view of Bauer (5,744,776) in view of Foreign Patent no. (DE 29813528UI) and Pilkington (4, 9020, 495).

Bauer discloses a method of forming a weakening area in an airbag cover substantially as claimed comprising: providing a cutting support (Fig. 1); providing a cutter 18; placing the airbag with the decorative layer 118 facing down on the support; and cutting a tear line of a predetermined pattern (Fig.9-16). Bauer does not show a blade and an oscillating cutter. However, Foreign Patent's 528U1 teaches the use of a blade 10 for the purpose of reducing

Application/Control Number: 09/944,157

Art Unit: 3724

deformations and stresses in the leather structure. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified Bauer's cutter by providing the blade as taught by Foreign Patent's 528U1 in order to reduce deformations and stresses in the leather structure.

Regarding the oscillating cutter, Pilkington teaches the use of an oscillating cutter 40 for the purpose of obtaining a better cut of the product. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified Bauer by providing an oscillating cutter in order to obtain a clean cut.

6. Claim 16 is rejected under 35 U.S.C. 103(a) as being unpatentable over Bauer (5,744,776) in view of Foreign Patent no. (DE 29813528UI) as applied to claim 15 above, and further in view of Foreign Patent no. DE 4424686 A1.

The modified device of Bauer discloses the method of forming a weakening area in an airbag cover substantially as claimed except for an end having a semicircular shape. However, Foreign Patent '686 teaches the use of an end having a semicircular shape 18, 20 for the purpose of preventing the tearing action that occurs along the breaking line from being extended beyond the end of the breaking line. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified Bauer's device by providing the end having a semicircular shape as taught by foreign patent'686 in order to prevent the tearing action which occurs along the breaking line from being extended beyond the end of the breaking line.

## Response to Arguments

7. Applicant's arguments have been fully considered but they are not persuasive. Another example that a knife is old and well known in the art, it is Andrea Robin et al. (GB 2276354 A) using a hot knife, for the purpose of forming breaking lines in an airbag cover. In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See In re Fine, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, the motivation to combine can be found in Bauer, col.2, lines 50-53, where the use of a mechanical cutting device is disclosed. Also, Bauer discloses that the use of a blade is old and well known in the art by referring to Pat. No. 5,082,310, where blade 72 is used to cut decorative layer. The fact that Bauer's device prefers a laser instead of a blade is irrelevant because it clearly teaches the use of blade for cutting airbag cover and the use of patents as references is not limited to what the patentees describe as their own inventions or to the problems with which they are concerned. See MPEP 2123.

### Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Nusshör is cited to show related device.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Omar Flores-Sánchez whose telephone number is 703-308-0167. The examiner can normally be reached on 8:00-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Allan Shoap can be reached on 703-308-1082. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
